

LËTZEBUERGESCH CLAVIER

“Mir wëlle bleiwe wat mir sinn.”

This keyboard's dictionary is not a fixed list: it is rebuilt with every release from two public corpora: **LuxAlign**, 180,342 sentences from the press, and **LETZ**, the example sentences of the *Lëtzebuenger Online Dictionnaire*. The language it suggests is the one people write, not that of a dictionary frozen once and for all.

Free · No ads · No account · Voice typing

Lëtzebuergesch Clavier is a citizen project published by Médhi Famibelle. No personal data is collected: what you type stays on the device. Only voice typing, when you tap the mic, sends your voice to the University of Luxembourg's LuxASR service, which transcribes it without keeping it.

WHY

Why a Luxembourgish keyboard?

- Your phone “corrects” your Luxembourgish into German or French.
- ë and ä hide in an accent menu, word after word.
- You doubt your spelling in every message.
- You can say it, but not write it.
- **This keyboard is made for you.**

Inside: accents at your fingertips, voice typing, words no longer underlined in red, seven games with their card deck, and eight levels. Turn the leaflet over.

LËTZEBUERGESCH CLAVIER

**You speak it.
Now you can write it.**

TYPE “SCHUEB” it suggests “Schueberfouer”

Ë · Ä · É each has its own key, no more hunting

SPEAK tap the mic, say your sentence, there it is

Point your camera at it: the Google Play page opens, all that's left is to tap Install

From Google Play, like any other app: installation and updates are automatic.

A button in the app goes straight to the right Android screen. The system then shows a warning about typing: it is generic, Android shows it for every third-party keyboard, and this one sends nothing you type.

The keyboard picker opens: choose Lëtzebuergesch Clavier and type your first word.

What it does for you

- The **Luxembourgish word** appears before you finish typing it
- **é, ä, ë** have their own keys; for other accents, hold your finger down
- It understands you **without accents** too: “letzebuergesch” suggests “lëtzebuergesch”
- Your Luxembourgish words are **no longer underlined in red**, in any app
- Tap the **mic** and speak: it writes in Luxembourgish (internet connection needed)

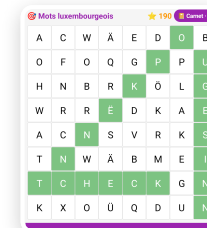

It also guesses the next word: after “op der”, it already suggests “Stad”, “Police”, “Rue”. Fewer letters to type, fewer mistakes.

Learn as you type

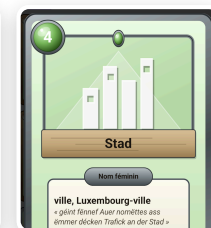

word search, anagrams, a word in six tries, fill-in-the-blanks, numbers, crosswords, word fill-ins.

every word you win becomes a card, and the words
you type move it forward.

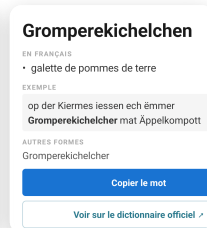

a word escapes you? It translates both ways, offline.
